"The H-cacherin (CDH13) gene is inactivated in human lung cancer.";
Hum. Genet. 103:96-101(1998).
-!- FUNCTION: CADHERINS ARE CALCIUM DEPENDENT CELL ADHESION PROTEINS.
THEY PREFERENTIALLY INTERACT WITH THEMSELVES IN A HOMOPHILIC
MANNER IN CONNECTING CELLS; CADHERINS MAY THUS CONTRIBUTE TO THE
SORTING OF HETEROGENEOUS CELL TYPES.
-!- SUBCELLULAR LOCATION: ATTACHED TO THE MEMBRANE BY A GPI-ANCHOR (E
SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This SWISS-PROT entry is copyright. rused protein recognised by pemphigus vulgaris auto:antibody - useful to treat and diagnose pemphis vulgaris Claim 1; Page 7-9; 9pp; Japanese.
W07908 represents the human pemphigus vulgaris (PV) antigen extracellular region. The PV antigen is produced in patients with pemphis vulgaris resulting in autoimmune disease. PV is a rare relapsing disease causing suprabasal, intra-epidermal bullae (vesicles) of the skin and mucuous membranes, which is fatal if untreated. The PV antigen was fused to a human IgG1 hinge region and the resulting fusion protein is useful to treat or diagnose
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Homo sapiens.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        သို့
                                                                                                                                                                                                                                                                                                                      Premphigus vulgaris auto-antigens and multiple sclerosis non-self pri antigens - useful in disease treatment, and method for identification of other self and non-self antigens implicated in auto-immune disease

Claim 1: Page 40; 58pp; English.

Claim 1: Page 40; 58pp; English.

Chaim 2: Pharmaceutical preparations for tolerisation to antigens comprise ceither an isolated human non-collagen or non-myslin basic protein (MBP) polypeptide which is capable of tolerising an individual to an autoantigen; or an isolated human pathogen polypeptide capable of tolerising an individual to that polypeptide. In both cases, the polypeptide (whether self or non-self) includes an amino acid sequence corresponding to a sequence motif for a MHC class II protein, such as HLA-DR, which is associated with a human autoimmune disease and which binds to the polypeptide to activate autoreactive T-cells in individuals with the autoimmune disease. This peptide is derived from the human desmoglein a protein (amino acids 260-220) and is implicated as a self epitope in pemphigus vulgaris. Peptides derived from the human desmoglein protein are described in W04841-47.

PT Microparticle encapsulated nucleic acids - for recombinant with perpension of proteins e.g. in gene therapy

PT expression of proteins e.g. in gene therapy

PS Disclosure; Column 4; 42pp; English.

CC comprising a polymeric matrix and a nucleic acid. The polymeric comprising a polymeric matrix and a nucleic acid. The polymeric comprising a polymeric matrix and a nucleic polymers having a solubility comprising a polymeric matrix consists of one or more synthetic polymers having a solubility comprising a polymeric matrix consists of one or more synthetic polymers having a solubility comprising a polymeric matrix consists of the microparticles have a diameter of less than 10 more membodiment the microparticles are coloum from includes an expression control sequence conservatively linked to a coding sequence, where the expression product cof the coding sequence is a polypeptide having a length and a sequence compression product is thus an effective stimulator of an immune compressed by the nucleic acid. It is associated with pemphigus the control captic portion of the processed by the nucleic acid. It is associated with pemphigus

A microparticle preparation (MP) has been developed, consisting of microparticles having a diameter of less than 100 mu m. The MP comprises:
(a) a polymeric matrix (PM) consisting of one or more synthetic polymers having a solubility in water of less that 1 mg/l; and (b) an expression vector selected from RNA molecules (at least 50% of which are closed circles) or circular plasmid DNA (at least 50% of which are supercoiled). Also described is a MP of at most 20 microns in diameter, comprising; (a) a PM; and (b) a NAM comprising an expression control sequence operatively linked to a coding sequence, where the coding sequence encodes an expression product selected from: (1) a polypeptide at least 7 amino acids in length, having a sequence identical to the sequence of: (1) a fragment of a naturally-occurring mammalian protein; or (ii) a fragment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       21-JUL-1998.

This sequence represents a fused protein recognised by pemphigus foliaceus patient autoantibody which comprises the constant region of IgG linked to the extracellular region of pemphigus foliaceus antigen protein through the hinge portion. Pemphigus foliaceus is a chronic, generalised, vesicular and scaling skin eruption similar to dermatitis herpetiformis. The pemphigus foliaceus antigen fusion protein is useful to treat pemphigus foliaceus. The antigen is especially administered through an adsorbent upon which the fusion protein for detecting pemphigus foliaceus antibodies which is also useful for detecting pemphigus foliaceus antibodies which is useful in immunodiagnosis. The fusion protein has little or no side effect
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            W15489;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    a mammal; (2) a peptide having a length and sequence which permits it bind to an MHC class I or II molecule; and (3) the polypeptide or the peptide linked to a trafficking sequence. W69763 to W69765, and W78793 to W78897 are peptide fragments for use in the present invention. The MPS are highly effective vehicles for the delivery of polynucleotides into phagocytic cells. They can be used for gene therapy, e.g. for treating genetic diseases, infections or tumours or for downregulating

This pc claim 17; Page 130-132; 146pp; English.

CC 88085-886867 represent the sequences for three protocadherins. This pc sequence represents the rat protocadherin pc5. These sequences are related to cadherin, and possess cell adhesive ability. Cadherins are composed of an N-terminal extracellular domain cadherins are composed of an N-terminal extracellular domain control of the consists of 5 unique subdomains, a membrane spanning domain, and a composed of an N-terminal extracellular domain cytoplasmic domain interacts with the cytoplasmic domain interacts with the cytoplasmic domain is not present in all cadherins, but in those which possess it, it is essential for the cadherins adhesive function. The cytoplasmic domain is not present in all cadherins adhesive function. The cadherins which do not possess a cytoplasmic domain appear to the cadherins which do not possess a cytoplasmic domain appear to protocadherins and interacts and a different method from those with a cytoplasmic domain.

CC These sequences were isolated using primers i and 2 (see T03575 and constitution) and the cell cell cell cell adhesive properties. Antibodies produced against these sequences are useful for modulating the binding activity of these constitutions and can be used therapeutically.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

P Antibody reactive with part of desmosomal cadherin - exposed on surface of epithelial or carcinoma cells, not bound to desmosomes, useful for diagnosis and treatment of carcinoma micrometastases of Claim 9; Page 5; 8pp; German.

C The present sequence is a segment of the desmosomal cadherin (DC), desmoglein Dsg2, which is exposed on the surface of epithelial or carcinoma cells and not bound to desmosomes. An antibody (Ab)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

CT This represents a Streptococcus pneumoniae protein that is a possible contion transporting ATPase, and is encoded by a DNA of the invention. CT The DNA sequences were isolated from Streptococcus pneumoniae strain CC 0100933 (NCIMB 40794). The Streptococcus pneumoniae proteins of the CC invention can be used to identify compounds which interact with and CC inhibit or activate the activity of the proteins. Antagonists can be used to treat diseases caused by S. pneumoniae proteins, through genetic climunisation. They can also be used to induce an immunological response in a mammal by inoculation with the S. pneumoniae proteins or delivery cof the encoding nucleic acids in a vector adequate to produce antibody and/or T cell immune responses to protect the animal from disease. The CC proteins can also be used to identify antimicrobial compounds which are capable of inhibiting their bioactivity. In particular the proteins of the invention can be used to prevent adhesion of bacteria to mammalian cell invention of pathogenesis in infections initiated other than by the implantation of in-dwelling devices or other surgical techniques.

Streptococcus pneumoniae nucleic acid for evaluating gene expression, and ic id sequences - v used in DNA chips n of virulence

genes Claim 3;

Claim 3; Pages 288-291; 333pp; English.
This sequence represents a Streptococcus pneumoniae cation transporting ATPase. The invention provides DNA sequences (V65201 to V65304) from the Streptococcus pneumoniae genome and corresponding protein sequences

A recombinant host containing a vector comprising any of the above nucleic acids can be used for the recombinant expression of the proteins. The invention also provides a DNA chip having arrayed on it at least 15 base pair fragment of any one or more of these DNA sequences. The DNA chip can be used methods for evaluating gene expression in S. pneumoniae and for identifying virulence genes in S. pneumoniae. Antibodies that selectively bind to the above proteins or peptide fragments can be used to treat
                                                         The pro
                                                                           Disclosure; Fig 2A; 91pp; English.

The DNA sequence encoding this protein was isolated from clones selected from a pea nodule cDNA library from the variety of P.sativum. Human AS cDNA was used as a probe-
                                                                                                                                                                                                                                                                                                                                                                                                                             Pisum
                             coding sequence. Recombinant AS can be used to engineer herbicinesistance, as a dominant selectable marker, to select novel herbicides or compounds useful for synchronising plant cells in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   transgenic plants

transgenic plants

Disclosure; Fig 2B; 91pp; English.

The DNA sequence encoding this protein was isolated from cDNA clones selected from a pea nodule cDNA library from the "Sparkle" variety of P.sativum. Pea ASI CDNA was used as a probe.

The protein is produced by expression vectors containing the AS2 coding sequence. Recombinant AS can be used to engineer herbicide resistance, as a dominant selectable marker, to select novel in the AS2 coding sequence as a dominant selectable marker, to select novel to several sections or compounds useful for synchronising plant cells in

There are several serious of high local homology (greater than 80%) shared between the pea AS and human AS polypeptides. See also Q06598, Q06622 and Q06623.

                                                                                                                                                                                                                                                                                                                               Streptococcus pneumoniae polynucleotides - useful for developing products for diagnosis, prevention and treatment of infections e.g. pneumonia, bacteremia, meningitis or endocarditis Claim 5; Page 32; 181pp; English.

The sequence is that of a Streptococcal polypeptide. The polypeptide can potentially be used for the diagnosis and prevention of bacterial infections, especially SP infection. It may be used for the treatment of diseases such as otitis media, conjunctivitis, pneumonia, bacteremia, meningitis, sinusitis, pleural empyema, endocarditis or infection of the cerebrospinal fluid. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed
and is derived by analysis of the total score distribution.
